PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3+ years of experience designing, building, and optimizing scalable, high-performance web applications. Strong hands-on background in React, Angular, FastAPI, and Express, combined with expertise in system design, performance optimization, and backend architecture. Proven track record delivering production-ready solutions through CI/CD pipelines, Docker, and Azure in agile SCRUM environments. Experienced in leveraging AI-powered development tools and agent-based workflows to automate repetitive tasks, accelerate debugging, and improve overall development efficiency.

WORK EXPERIENCE

TEAM TECH SOLUTIONS | United States

Software Developer April 2023 - January 2025

- Developed a Full Stack application for recording medical service capitalization in the United States, using Angular (frontend) and FastAPI with SQL (backend), integrating RabbitMQ for communication with external services.
- Designed the frontend with Angular applying lazy loading, route guards, and REST API consumption, implementing responsive interfaces with Bootstrap following modular architecture best practices.
- Managed deployments using Docker, Azure WebApp, and Azure Registry, ensuring reliable continuous delivery in production environments.
- Optimized application performance by 40% through modular loading and critical component optimization, and increased backend efficiency by 20% via optimized FastAPI queries.
- Accelerated continuous software delivery by implementing CI/CD pipelines, reducing deployment times and increasing release reliability under Scrum methodology with biweekly sprints.

SISTECREDITO | Colombia

Software Developer July 2020 - March 2022

- Developed key frontend projects for credit management, financial core (accounts receivable and payable), and the corporate website using Angular 12 with a modular and maintainable architecture.
- Implemented responsive and intuitive interfaces with Bootstrap, ensuring optimal user experience across multiple devices, and consumed HTTP services to integrate credit bureaus and internal backend systems.
- Achieved 80% unit test coverage per deployment, strengthening system reliability and stability in every release.
- Contributed to the redesign of the main website during the corporate rebranding, improving brand identity and overall user experience.

MULTIMEDIA LAB | Colombia

Software Developer January 2020 – July 2020

- Developed custom web and mobile projects using Angular, React, and React Native, consuming RESTful APIs for data integration and delivering high-performance applications tailored to each client's requirements.
 - Customized and adapted WordPress templates to build corporate websites, adjusting functionality and design to specific business needs.
 - Delivered projects on time across diverse technological environments, demonstrating adaptability to modern frameworks and a strong focus on client satisfaction.
-

TECHNICAL SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, Angular, React.js, TailwindCSS, Bootstrap, Unit Testing

Backend: Python, FastAPI, Node.js, Express.js, RESTful API, Swagger

Databases: SQL, NoSQL, MongoDB, PostgreSQL, Firebase, SQLite

DevOps & Tools: CI/CD, Git, GitHub, Docker, Postman, Azure, Agile, SCRUM

AI & Productivity: AI-assisted development, AI agents, Prompt Engineering, GitHub Copilot, Claude Code, Workflow Automation, AI coding assistants

EDUCATION

Universidad de Medellín | Colombia

Bachelor's Degree in Systems Engineering 2015 – 2021
